

Building Information Modeling (BIM) Policy Statement

Protek (UK) Ltd is committed to the implementation of BIM and fully supports collaborative working to achieve effective and efficiently designed, constructed and managed projects. BIM is an integrated process that enables projects to be designed, constructed and maintained more efficiently and effectively.

The common data environment allows early, accurate and efficient sharing of information between team members working on a collaborative project. At its core is a single information source accessible by all parties involved in the delivery process.

The process ensures that information is only generated once and re-used as necessary by others thereby avoiding duplication of effort

We will work with our clients and the wider project team to achieve the benefits of a BIM collaborative environment system. We will comply with best practice and client policies and standards.

We will provide appropriate software, hardware, adequate training, information and instruction to enable our staff to work efficiently and effectively in a BIM environment.

All staff are required to comply with the policy, procedural requirements and share in the responsibility for our performance in implementing BIM.

We require the full co-operation and support from all our employees and the wider project team involved with BIM projects.

This Policy Statement will be reviewed annually or when required due to changes in working practices or legislation. Following the review revisions will be made as necessary.
